

Global Warming global changes

Global warming is causing major changes in our world. Animals and plants are trying to live with these **changes**. If we do not do anything to stop the **speed** our planet is **heating up**, many of these **species** will become **endangered** or even extinct!

Birds

Birds that live in **wetlands** will lose their **habitat** as global warming **dries up** their homes.

As fish won't have food to eat, they will die. So, seabirds that eat fish will die too.

Deserts are **expanding**. This means birds that migrate long **distances** will be in danger as they won't be able to find food **on their way**.

Sealife

- Galapagos penguins will not be able to survive because the fish they feed on are **moving north** to cooler waters.
- Rising sea levels will **destroy** the places sea turtles **lay** their eggs.

Land Animals

- Elephants will have no place to live because their home will get hot and dry.
- Polar bears will get thinner and may die of **hunger**. Because of the melting ice, they won't have a place to hunt or fish to eat.
